

WASTE MANAGEMENT POLICY

Any substance or object discarded by an operative working on behalf of JCNWL, intended for or requiring to be discarded is waste and as such is subject to a number of regulatory requirements.

The term "discard" has a special meaning. Even if material is sent for recycling or undergoes treatment in house, it can still be waste.

Solid Waste Mandatory Requirements

The Duty of Care requires that we ensure all waste is handled, recovered or disposed of responsibly, that it is only handled, recovered or disposed of by individuals or businesses that are authorised to do so, and that a record is kept of all waste received or transferred through a system of signed Waste Transfer Notes.

If we work as a Sub Contractor and the Main Contractor arranges for the recovery or disposal of waste that we produce, we are still responsible for that waste under the Duty of Care.

If we transport our own waste which is either building or demolition waste we will be registered as a waste carrier with the Environment Agency.

Jamieson Contracting (NW) Ltd is registered and the registration number is:- CBDU65070

CB/PN5714JS

We are mindful of the environmental impacts, hence any materials requiring recycling such as copper cable, either on our premises or elsewhere are likely to be waste and will be subject to the waste management regime and the Duty of Care.

In the event of the material being handled having hazardous properties, it may need to be dealt with as 'Special Waste.'

We always assess, prior to disposal, as to whether it is Special Waste. Containers may be Special Waste if they contain residues of hazardous or dangerous substances / materials. If the residue is 'Special', then the whole container is Special Waste.

We do not burn cable or cable drums on site, we always seek an alternate route for disposal.

WASTE MANAGEMENT POLICY

Good Practice

Before allowing any waste company or contractor to remove a waste material from our site, we confirm where the material will be taken and obtain a copy of their waste management licence or evidence of exemption for that facility.

We segregate the different types of waste produced from our works. This makes it easier to supply an accurate description of the waste for waste transfer purposes.

Minimising the quantity of waste that we produce saves money on raw materials and disposal costs.

We clearly label all waste skips for ease of use for the site operatives filling the skips.

We ensure no materials are left on site when our work is complete. By leaving materials behind, we may be discarding them. If they are discarded they will be 'waste' and, as the producer of that waste we will be responsible for it.

A handwritten signature in black ink that reads 'Chris Jamieson'.
